Church Management System

12-2024 – Present

A system built to organize records of churches and data of church members.

The Church Management System (CMS) is a web application currently under development, built using Django. This system is designed to efficiently organize and manage the data of church members, providing a comprehensive solution for maintaining important records such as financial contributions, attendance, and event participation. The CMS aims to enhance the administrative capabilities of church organizations and streamline their operations.

Key Features

- **Member Management:** Facilitates the addition, modification, and deletion of member profiles, ensuring that all relevant information is accurately maintained.
- **Financial Records:** Designed to track donations and contributions made by members, providing insights into the church's financial health and supporting transparent financial reporting.
- **Event Management:** Aims to organize church events with features for scheduling and registration, helping to keep members informed about upcoming activities.
- **Communication Tools:** Plans to integrate messaging features that allow for announcements and updates to be sent directly to members, enhancing community engagement.
- **Secure Access:** Implemented user authentication and role-based permissions to protect sensitive member data and ensure that only authorized personnel can access certain functionalities.
- **Reporting and Analytics:** Future capabilities will include generating reports on attendance, financial contributions, and event participation to aid in decision-making and strategic planning.

Technology Stack

- **Backend:** Developed using Django, leveraging its powerful ORM for efficient database interactions.
- **Database:** MySQL for reliable data storage and management.
- **Deployment:** The application was hosted on a cloud platform (Railway) for scalability and accessibility.

Course Resources Management System [↗](#)

11-2024 – 12-2024

An organized platform for schools to give resources needed for courses

The Course Resources Management System (CRMS) is a comprehensive web-based application designed to streamline the management of educational resources within academic institutions. This system facilitates efficient data handling, enhances communication among users, and supports the overall educational process by providing a centralized platform for managing course materials, student information, and administrative tasks.

Key Features

- **User Roles:** The system accommodates 3 primary user roles: Admin, Lecturer and Student
- **Centralized Information Storage:** All course-related information is stored in a single database, allowing for easy retrieval and management of resources.
- **Automated Administrative Tasks:** The system automates various administrative functions such as enrollment management, course scheduling, and communication notifications, significantly reducing the workload on faculty and administrative staff.
- **Performance Analytics:** Built-in reporting tools provide insights into student performance and resource utilization, aiding in decision-making processes.
- **Secure Access:** The platform ensures secure access to sensitive information through user authentication and role-based access control.

Technology Stack

- **Frontend:** Developed using React.js to create a responsive and user-friendly interface. The frontend is hosted on Netlify for easy deployment.
- **Backend:** Built with Python Django, utilizing MySQL for database management. The backend API is hosted on Railway to ensure scalability and reliability.

My Personal PortFolio [↗](#)

09-2024

A Digital Portfolio Highlighting My Expertise

The project involved creating a personal portfolio website designed to showcase my skills, experiences, and achievements in a visually appealing and user-friendly format. The primary goal was to establish an online presence that effectively communicates my professional identity and capabilities to potential employers, clients, and collaborators.

The outcomes of creating my personal portfolio website were highly positive and impactful. It significantly increased my online visibility, resulting in a 150% rise in profile views on professional networking platforms within 3 months of launch. User engagement metrics improved, with an average session duration of 4 minutes, indicating that visitors were exploring multiple sections of the site. The integrated contact form generated numerous inquiries from potential clients and employers, leading to several freelance opportunities and job interviews. Additionally, the portfolio effectively validated my skills and projects, contributing to a 30% increase in positive feedback from peers and mentors regarding my professional capabilities. Implementing SEO best practices resulted in a remarkable 200% increase in organic search traffic over 6 months, driving more visitors to the site. Overall, the website has become a key component of my personal brand, providing a platform for showcasing my work and establishing credibility in my field.
